Project Euler Problem 16

Brandon Roberts

9 January 2019

Sum of digits of 2^{1000}.

It was obvious after seeing this has about 300 digits that I had to make a matrix to hold the digits, no type of int would work.

After creating a matrix times scalar function to mimic multiplication by 2 in the integers I was able to repeat 100 times and sum matrix to get:

Solution: 1366.
